Summary

Moulik Sharma is a Programmer Analyst Trainee with a Bachelor of Technology in CSE-AIML from RGPV University, Bhopal. He is passionate about IOT, Machine Learning and Data Analysis, and has hands-on experience through projects like Telehealth platform, Machine health monitoring dashboard, and Ticket booking systems . In this initiative, he developed a high-accuracy ML model (95%+) to detect emotions from speech, overcoming data challenges. Moulik thrives on tackling new challenges and is driven to continuously expand his technical expertise through innovative problem-solving.

Area of Expertise

- C Programming
- C++
- Linux
- Python
- Sql

Industries

- IoT
- Machine Learning
- Data Anaytics

Work Experience

Cognizant

2025 - Present

Programmer Analyst Trainee

During my time at Cognizant, I received comprehensive training in C, C++, and Linux, which not only deepened my understanding of core programming concepts and system-level operations but also equipped me with the practical skills needed to develop efficient, reliable software solutions in a professional environment.

Education

Oriental Institute of Science and Technology,Bhopal

Bachelors of Technology

2021 - 2025

- CSE- Artificial Intelligence and Machine Learning
- CGPA - 8.51

Language

- English
- Hindi

Outside of Work

During my college days, I actively took part in extracurricular activities. I was Head Event Management and during my tenure I organized events like TEDx and Coding Bootcamps. Apart from that I was part of various clubs like Google Developer Group and more.

Projects

IOT Machine Health Monitoring

Training Project

- Continuously generates sensor data (temperature, RPM, vibration).
- Periodically aggregates data, computes averages, and logs them.
- Triggers alerts if thresholds are exceeded.
- Provides a terminal dashboard to view latest readings, averages, and alerts.

SANSKRITI SAATHI

College Project

- Developed a comprehensive cultural tourism platform enabling users to book tickets for museums and heritage sites. Integrated Razorpay API for secure and seamless payment processing. Designed and deployed a machine learning–based chatbot that provides real-time information about cultural locations and facilitates ticket booking. Successfully integrated the chatbot and booking system with WhatsApp to enhance accessibility and user engagement.

AAROGYA MITRA

College Project

- Developed a Django-based telehealth platform integrating an AI/ML-powered chatbot to provide real-time assistance for mental health and general medical queries. Designed to enhance accessibility and support for users seeking confidential, reliable healthcare guidance. Implemented intelligent response systems, secure backend architecture, and user-friendly interfaces to ensure seamless interaction and data privacy.
